Mr. Jack Morrone, President
8315 Rivoli Road
Bolingbroke, GA 31004

Dear Mr. Morrone:

As you are very much aware, Lamar County Schools has been one of the first school systems to try Nx-On "Bio-Static Surface Protection". Succinctly and summarily, please know that we are astounded at the difference in the "before" and "after" results of your application in our school buses. We saw improvements in our infection level drop dramatically – from five to hundreds of times better. Such statistics are unbelievable – but very true. In short, our buses now have a healthier environment thanks to your product.

We also discovered that your service was outstanding. Thank you for working around our school schedule and for supervising the process. Our folks were most impressed with the thoroughness of the application – hitting nooks and crannies – and the commitment to make sure our time was valued. We look forward to the follow-up applications.

As resources become available, we hope to add other locations within our school system where Nx-On "Bio-Static Surface Protection" can help safe guard our students and employees' well-being. This is a great product with factual measurements of success to back it up.

Thank you for sharing your time and resources with us. We are the beneficiaries of something very helpful to our cause of student attendance and learning.

Sincerely,

Dr. Bill Truby
